Industrial Doors and Loading Bays Service Maintenance and Repair

BID Group is a leading supplier of Service, Maintenance and Repair solutions as well as a manufacturer and supplier of Industrial Doors, High Speed Doors, Gates, Barriers and Loading Bay Equipment.

BID Group's UK network of service technicians, service, maintain and repair not only our own Industrial Doors and associated products but also those you may have purchased from other manufacturers.

Our maintenance contracts provide a regular program of inspection and servicing ensuring that any potential problems are highlighted at an early stage to prevent inconvenient and costly breakdowns.

Plus, you'll be supported by a 24/7 call out service ensuring any urgent repairs can be attended to quickly and efficiently keeping your operations running smoothly.

BID Group Ltd

- BID Industrial Doors
- Klimate High Speed Doors
- BID Loading Bay Equipment
- PSM Gates & Barriers

Why a regular service programme is so important

1. Meet Health and Safety Regulations

Having doors, gates and barriers serviced and maintained regularly ensures companies are meeting their obligations under various pieces of legislation: Workplace (Health, Safety and Welfare) Regulations 1992, The Regulatory Reform (Fire Safety) Order 2005 and Provision and Use of Work Equipment Regulations 1998. This helps to keep your employees safe at work and ensures you're complying with all regulations. Failure to comply with these regulations can have serious consequences, including fines, imprisonment, and disqualification as well as the risk of an accident causing serious injury. Further details and legislation can be found on the HSE website www.hse.gov.uk.

2. Costly Breakdowns are Avoided

Keeping your high speed doors, loading bays, gates and barriers well maintained minimises the risk of large and serious breakdowns which are often very expensive to repair. Regular servicing ensures your equipment remains working properly and smaller issues are detected early on before they can develop into much more serious problems.

3. Reduced Downtime

When such crucial components of the production workflow like high speed doors break down, numerous operations are usually interrupted and have to stop working until the doors are back up and running again. Such long periods of downtime can be detrimental to a company, resulting in late deliveries and financial loss.

By mitigating the risk of more serious breakdowns through regular servicing, you can prevent costly and inconvenient downtime and keep your operations running smoothly.

4. Improved Security

When your access doors or perimeter security gates are not maintained properly, your company becomes more vulnerable to security breaches such as break-ins. The best way to avoid malfunctions that put your business at risk is to have your equipment maintained regularly, keeping your employees and assets safe and secure and your insurers happy.

5. Longer Lasting Equipment

Businesses that don't take care of their equipment properly typically find themselves having to replace assets within just a few years as a result of frequent breakdowns and costly issues. The cost of replacing an industrial door can be expensive, particularly if you're doing it more often than you need to. By maintaining and servicing your assets properly instead, you can prolong their lifespan, and save money as the cost of servicing assets is much cheaper than the cost to replace.

6. Maintain Energy Efficiency and Reduce Costs

High speed doors help to maintain energy efficiency within the building as they minimise the amount of time the door is open and letting out heat or chilled air. If your high speed door were to break down in an open position, your building could waste a lot of energy, increasing your energy bills.

Similarly, if your high speed doors aren't quite running as they should, they could be letting out more air than necessary. Preventative maintenance and servicing can help to avoid this, potentially saving your business money on your energy bills.

7. Prevent Contamination and Pollution

High speed doors are also very effective at keeping out pollution, dust, and dirt, helping to minimise the risk of contamination which can be absolutely essential in highly sensitive and environmentally controlled premises.

Should your high speed doors ever have a serious breakdown, your workplace is at risk of contamination which could be detrimental to some businesses. Preventative maintenance and servicing can help to avoid this, ensuring your workplace is as contamination-free as possible.

At BID Group, we have a network of qualified engineers strategically located across the UK, ensuring any emergency callout can be attended to as quickly as possible, 24/7, 365 days a year, no matter the type or brand. Our service desk is the contact point for emergency call outs and repairs during normal office hours. Out of hours we operate a call out service, ensuring qualified and equipped engineers are on hand whenever you need.
